Message:

Make Ireland a sustainable global leader in reducing climate change by requiring existing building stock to upgrade to A rated energy standards, install solar panels and rainwater harvesting systems.

--

This e-mail was sent from a contact form on National Planning Framework (<http://npf.ie>)

To make Ireland a sustainable country and global leader in reducing the impact of climate change:

Make it compulsory for all existing building stock to upgrade to A rating energy standards and install solar panels and rainwater harvesting systems. Such a policy instrument would create an industry in sustainable technology and reduce the overall cost for individual's households buying these systems. Also more money would be available in the country as a result of reducing how much we nationally spend on energy and petroleum.
